Creating a Basic C++ Program in Visual Studio 2022
Create a new project.
Enter C++ in the search box above.

Then select Empty Project.
Type a project name.

Select the preferred folder.

Then select Create.
In the right top frame: Select Source Files

Right Click on Source Files, to open the menu.

Select Add.
Select New Item.

Select C++ File, type a file name, then select Add.
Type the program code in the white frame.

Select File, Save program.
Select Build, then Build project name.

Review the results/errors on the bottom Output window.
Select Debug then Start Without Debugging.

The program will now run.
View the results of the program’s output.
